Knowledge Management Framework - 2027

Enabling partner disciplines	
Project + Process management	KM practice enables to work more efficiently and deliver results faster and more reliable
Change management	Addresses the human and organizational changes required to establish new KM practices
Quality management	Implements KM practices into processes based on ISO norms to improve quality and continuous improvement
HR management	Supports competence development, onboarding, successes and knowledge retention
Organizational management	Develops structures, culture and behaviors that enable organizational learning
Information + Data management	Provides methods and practices for organizing, maintaining, understanding and accessing information and data
IT + AI management	Provides the technological infrastructure supporting knowledge and information-related practices

KM Value Creation: Improving efficiency , speed and avoiding wasted time and double work in any of the core business functions and within the partner disciplines as well. KM means faster execution, better decisions, innovation and risk reduction. **Key KPIs are cost and time reductions or any other increases in productivity or profitability accepted in the respective organizations.**
